---

## Summary

- Automation-first freelancer delivering scoped scripts and operational tooling on macOS and Linux.
- Focus: retry logic, service packaging, network/router verification, and local LLM automation.
- Working style: scoped artifact first, not open-ended consulting.

## Services

- Type A: fixed \$80-\$220 - 1 script, README, runbook, 24-72h.
- Type B: \$40-\$90/hr - integration, tuning, monitoring, and support.

## Verified Deliverables

- router\_port\_verify.py - TCP/HTTP verification with retries.
- tron\_grpc\_compat\_preflight.py - offline gRPC/TLV checks.
- tron\_watchdog.js - node health monitor with timeout/reconnect logic.
- tplink\_portforward\_guide.md - keyboard-driven router flow guide.

## Skills

- Languages: Python, JavaScript/Node.js, Bash.
- Packaging: Docker Compose, PM2, service files.
- Networking: TCP/HTTP probing, routers, NAT behavior.
- Apple Silicon: local model serving notes and Metal-aware tuning.

## Work Approach

- Default to CLI, API, or keyboard-assisted flow when UI automation is blocked.
- No secrets stored; credentials handled as placeholders only.

## Projects

- Aliens\_eye-portfolio: automation scripts, node tooling, and portfolio packaging.
- Fiverr assets: gig copy, buyer-request replies, week-1 funnel playbook.
